

Advanced Energy Management Ltd.

Putting our energy into saving yours

Advanced Energy Management Ltd. (AEM) is looking for an HVAC/Controls Service Technician (Journeyman) for the Fredericton area. We have had great success growing our service base over the last 5 years and need an HVAC tech who has good experience in troubleshooting HVAC systems and would like to learn how to service our control systems.

We have established a great service team and support infrastructure for sales and dispatch. **AEM** utilizes technology to assist technicians in getting their work done. We use paperless service work order and time sheet entry systems. Employees can do their time sheets on line from home or anywhere that an internet connection exists. At **AEM** we treat employees very well. We offer paid vacations and Stat Holidays, additional paid leave for sick time, and company floater days. All technicians get a laptop for accessing building control systems and a blackberry for communication.

This job is ideal for someone who has been in the HVAC trade 5-10 years and has established themselves as a specialist who can communicate well with customers and who is good at troubleshooting systems. Typically, HVAC technicians who have come to us from other HVAC companies find this job much more rewarding and have high job satisfaction. Technicians are given a lot of autonomy to make day-to-day decisions and control their day-to-day activities. We also appreciate our employees. Employees who help us succeed are rewarded. Technicians are not treated as simply hourly employees. When the company does well, we share the fortunes with employees.

We are a local company with approximately 50 employees. Expand your knowledge - join our team and have a rewarding future in servicing HVAC and industrial controls systems.

Advanced Energy Management Ltd.

Putting our energy into saving yours

Job Description:

This person is primarily accountable for providing service, startup, and commissioning of HVAC mechanical and controls systems with the emphasis on air conditioning systems and plays the role of a technical expert in helping other technicians service mechanical systems. The role of a technical specialist is to foster incredible relationships with customers and to help our company secure business through these relationships.

Typical Duties include:

- Servicing of HVAC control systems in schools (240 such)
- Servicing the entire HVAC mechanical and controls system in commercial buildings
- Developing key customer relationships
- Troubleshooting and repairing of all elements of an HVAC mechanical/ controls system including refrigeration, ventilation, electrical, electronic, digital controls
- Providing recommendations for repair and improvements
- Identifying opportunities for retrofits of mechanical and control systems
- Commissioning of systems
